Angelus Britannicus :

A N

EPHEMERIS

For the Year of our Redemption, 1702.

Being the 2d after the Bissextile or Leap-year.

Since	The Creation of the World,	5651	Years
	The Death of our Saviour,	1669	
	The Conquest of this Nation,	636	
	The Restauration of K. Ch. II.	42	
	The Last great Plague,	37	
	The Burning of London,	36	
	The Last great Frost,	18	
	The Death of K. Charles II.	17	
	The Abdication of K. James II.	13	

Amplified with Observations

From the Sun's Ingress into the Equinoctial Sign
Aries, and the other Cardinal Points; with an
Account of the Eclipses, Conjunctions of the
Planets, and other Configurations of the
Cœlestial Bodies.

Calculated for the Meridian of the Famous City
of *London*, where the Pole Artick is elevated a-
bove the Horizon 51 degr. 32 min. but may in-
differently serve for *ENGLAND, SCOT-
LAND, and IRELAND.*

By *John Tanner*, *Studens in Physick and Astrology.*
The Forty Sixth Impression.

Agunt non Cogunt.

*Astra in voluntatem hominis, & liberum arbitrium indi-
recte & per accidens agunt, dum directe temperamentum
significant & desponunt, sensusque in consensum trahunt.*

London, Printed by *R. Janeway*, for the Company
of Stationers, 1702.

Ephemerides

Days of the Month.

A Table of the exact time of the Moon's coming to the South for every Day of the first six Months of the Year 1702. serving to find out more exactly the time of high Water in most of the Eminen Ports in England, Scotland, and other Ports adjacent

January hath xxxi Days.

*Beg Heaven's assistance to direct thy Quill ;
Think not i'th' least to gain Poetick Power ;
Nor yet pretend to a Prognostick Skill,
Since silent time hath cropt thy Youthful Flower,
And Atropos oft threatens (with'r fatal Knife)
To cut in twain the twine that holds thy Life.*

January 1702.

Days of the Month.

Although the two Supreams of Heaven dispenſe
Their fiery Beams the Nations to enſlave,
Let time diſcover where their influence,
What Monarchs and States ſhall feel the ſame;
Wiſh thoſe Grandees may moſtly feel their Ire,
Whoſe damn'd Ambition ſets the World on fire.

February high xxviii Days.

Days of the Month
 Days of the Week
 What'e're thou think'st, forbear thy Thoughts to tell,
 Of what great changes are on Fortune's Wheel
 Whe'er Austria or Bourbon bear away the Bell,
 Or which o'th' two most of the sting must feel,
 Or who shall most deflower fair Italy,
 Make Spain a Linsey Woolsey Monarchy.

Let us our Government and Laws defend,
Kingship and Tyranny are different things,
Th' one Rules by Law, which doth to freedom tend,
The other by his Will, by which oft springs
The Peoples Burthens great, then 'tis not strange
If they (uneasie) long to see a change.

April 1702.

Days of the Month.

When Justice guides the Helm do not complain,
But rather study how you may obey,
Disturbed Bodies to the Head brings Pain,
Clogs Justice Wheels, or turn't out of the way;
And if too loose the Reins of Justice be,
The People soon corrupted by't we see.

Conjunctions and other Observations.

May hath xxxi Days.

Who Rules by Justice let him be severe,
And let him be accounted truly great,
Obedience is true Freedom, without Fear,
Happy's the Subject, safe the Prince's Seat;
If Subjects lose besure they will complain,
And Subjects loss can't be the Prince's gain.

May 1702.

Month Days.

The Means should be directed to the End,
The End of Government's the Peoples Weal,
The Sword's put in his Hand them to defend,
Justice impartially to all to deal;
It's this preserves the Quiet of the State,
Confusion breeds, who these Rules violate.

B

June hath xxx Days.

*As 'tis unjust, so it's unmannerly
 To pry into every Fault of Government,
 Whilst Princes mostly see by another's Eye,
 And hears by th' Ear of every Confident.
 It then behoves each Prince to have a care,
 Who he confides in, who his Council are.*

June 1702.

Month Days. Let Ministers of State consider well,
Upon their Peril, what they undertake,
How they their Prince misguid, and who hath felt
From their high Post; take heed lest for the sake
Of private Passion, Avarice or Pride,
You him mislead, or by him drawn aside.

July hath xxxi Days.

When a Prince doth his Minister command,
Let him (as Duty binds) shew him the Law
Which is his Rule, and by it he must stand;
Of its Majestick Power to stand in awe
Is safest Condukt: Better to resign
Than Law's firm Structure seem to undermine.

September 1702.

Month
Days.

Tho' not in Tears, yet in sage Counsels old,
In Gown as well as Arms, thou hast excel'd,
Whether to settle Peace, or to unfold
The drift of hollow States hard to be spell'd;
How War may manag'd be, thy Counsels sage,
Strengthens her Nerves, settles her Equipage.

October hath xxxi Days.

Both Spiritual and Civil thou dost know,
 And hast shewn to preserve, which few have done,
 The Bounds of Peace and War to thee we owe,
 And reckon thee in chief their eldest Son.
 Doubt not but thy unshaken Valour brings
 Wherewith to clip Leagues, breaking Serpents Wings.

October 1702.

Month Days.

Let no good Man be of that senseless mood,
For to revolt from that which sets them free,
Pretending still to be both wise and good,
But from that Mark how far they rove we see.
Be not inticed to embrace base Slavery,
From the known Rules of ancient Liberty.

November 1702.

Month Days. 1
*What Man that's in his wits would once conspire
 To lose his All, ruine his Liberty,
 To spite his Neighbour, set his own House on fire ?
 Such are th' Effects of base Revenge we see.
 This is for want of a true Christian Frame,
 Most Infidels themselves abhor the same.*

December hath xxxi Days.

But are we Christians indeed, then let's obey
Our bleſſ'd Redeemer's Precepts, which is love
Of God and of our Neighbour; else we ſtray
From his true Church and Fold, by this we prove
Our ſelves not of his Flock, but of a Race,
Whom God diſowns, and Heaven hath in diſgrace.

December 1702.

Month Days.

Dear Country-men in this we all agree,
We would live happy and see better Days,
Let's all reform our lives, then shall we see,
Heaven shine on us, as the Sun's brighter Rays
Do fertilize the Earth; our times will mend,
God give us Peace here, and a peaceful End.

The Table of PORTS.

	H.	M.
<i>Queenborough, Southampton, Portsmouth, Isle of Wight.</i>	00	00
<i>Rochester, Malden, Aberd. Redland, West end of the Nore.</i>	00	45
<i>Gravesend, Downs, Rumney, Silly, Blackness.</i>	01	30
<i>Dundee, St. Andrews, Lisbon, Bell Isle, Holy Isle.</i>	02	15
<i>London, Tinmouth, Hartlepoole, White Bay, Amsterdam</i>	03	00
<i>Berwick, Flamborough Head, Bridlington-bay.</i>	03	45
<i>Severn, Leith, Dunbar, Kingsale, Callice Creek</i>	04	30
<i>Newcastle, Humber, Falmouth, Dartmouth, Lizard.</i>	05	15
<i>Plimouth, Weymouth, Hull, Lynn, Lundy, Holmes.</i>	06	00
<i>Bristol, Foulness, at the Start.</i>	06	45
<i>Milford, Bridgwater, Lands End, Waterford, Texel.</i>	07	30
<i>Portland, Peter-port, Harflew, Hague, Dublin.</i>	08	15
<i>Pool, Catness, Orkney, Isle of Man, Bass Island.</i>	09	00
<i>Needles, Lafo, North and South Foreland.</i>	09	45
<i>Tarmouth, Dover, Harwich, Callice Road, Bulloign.</i>	10	30
<i>Rye, Winchelsea, Goree, Thames, Rhodes.</i>	11	15

By the help of this Table, and the ☾'s Southing, you may find the time of High Water in any of the Ports specified in this Table, by adding the Hours and Minutes against the Ports, to the Hours and Minutes of the ☾'s Southing; the Aggregate or Sum is the Hour and Minute of the time of High Water at that Port. If your number exceed 12, subtracting 12 from it, the remainder is the time of High Water. Having so often explained the Use of this Table, I hope it needs no farther Explanation.

When the ☾ shines so bright as to cast a Shadow on the Sun-Dial, see where the Shadow falls; count how many Hours and Minutes it wants of 12, and subtract that from the time of her Southing that Night, and the remainder is the hour of the Night. If the shadow be upon any of the Hours past 12, add it to the time of the ☾'s Southing, and that is the Hour of the Night, subtracting 12, if the number exceed 12. If the Shadow be upon the Line of 12, the Hour and Minutes of the Southing is the hour of the Night.

Astrological Observations,

For the Year 1702.

From sweet Repose, and Thoughts of soft Retire,
Roux'd and amaz'd to hear the Noise of Fire,
All Europe in a Flame, 'las who can Sleep
Secure at such a time, or Silence keep?
Then blame me not, if I, poor helpless I,
Among the helpless Croud for Help do cry.
Where be the Engines now to stop the Flame?
Where be our Stout Men, and our Men of Fame?
For Heaven's sake stop it, or you'll quickly see
(Our Neighbours sinking) we shall not go Free.
Where's Brave Nassau? whose matchless Fortitude
Blew off the Cloud of our Distractions rude,
To make us happy hath the Means pursu'd.
Irish and Flemish Laureat VVreaths resound
Immortal Praise. In Peace his Care abound,
To help us save free Conscience from the Paw
Of Shaveling VVolves whose Gospel is their Maw.
Rouse up, Brave Hero, there is much remains!
Our Foes still threats to Bind our Souls in Chains.
Shall our Ingratitude Eclipse thy Glory?
Let Future Ages blush to hear the Story,
That barbarous VVolves, dull Asses, Apes, and Dogs,
Shall make Men say, thou cast thy Pearls to Hogs.
Oh may thy Virtue, Valour, Patience too,
Thy Foreign and Domestique Foes undo!
Let their black Projects 'fore thy Lustre fly,
As Clouds and Fogs, to clear the Azure Sky,
Before the Sun's bright Beams: and may the Story
Of William's Reign, sound England's Future Glory.
And may no Protestant Dissent from this,
To Pray for his Long Reign, and Future Bliss.

Astrological Observations, 1702.

WE are now come to the Year *Seventeen Hundred and Two*; a Year likely to prove full of Warlike and Prodigious Actions: all *Europe* either actually engaged in War, or making Warlike Preparations tending thereto. The Northern Kingdoms have drank deep of this Bloody Cup, and so are like if a Peace be not concluded between *Sweden* and *Poland*: Many Princes and States have, by their Mediation, endeavoured to put an End to that War, but the *Muscovite* labours to widen the Breach. But, to the great Amazement of *Europe*, Fair *Italy* is like to prove the Seat of a Bloody War. The Occasion is so well known to every Man, that it were Needless to say any thing of it here. *Pliny* gives *Italy* this Character; viz. *The Nurse and Mother of all Nations, Elevated by the Gods, to make the Heavens more glorious, to unite the Dispersed Governments of the VWorld, to fit the disagreeing Tongues and Languages of so many People by Commerce for Conversation and Discourse, thereby to teach Mankind Humanity or Civility, having first mollified or softened their barbarous Rites, Manners, or Usages*; so that in a word I may say, *Italy* is the common Country of all Nations and People in the whole *VWorld*. *Italy* deserved this Encomium in *Pliny's* time; but hath been often over-run by many Nations defiling their primitive Beauty by the Barbarity of other Nations, and now likely to suffer by the avaricious Encroachments of the grand Disturber of *Europe*.

In this Year is celebrated a Conjunction of the two Superior Planets *Saturn* and *Jupiter* in *Aries*, a fiery Sign and Head of the Triplicity, under which we are ever since the Year 1603, at which time they made their Entrance into the fiery *Trigon*, being their seventh Restitution to that Triplicity since the Creation of the World. Mr. *Lilly* was of an Opinion, that it had a more secret Mystery of *Sabbatism* in it, then any other; and promised something of more singular moment to the World: and every Man that hath been a strict Observer of Mundane Affairs, or conversant in History, may set his Seal to the truth of it. Upon their Entrance into this Triplicity, King *James I.* was established into the *English* Monarchy; a great Change indeed. The next Conjunction was in 1623, in *Leo*, soon after *Charles I.* ascended the Throne, as being his Successor.

Astrological Observations, 1702.

The next Conjunction happened in the beginning of the Year 1643, which, according to the accustomed Order of the Celestial Motions, and natural Course of the Superiors, should have been in *Aries*, but they made their Conjunction in *Pisces*, a Sign of the Watry Triplicity, and contrary to the nature of the former. *Campanella* saith, *Sub quarto Trigono, qui primum respicit hostili radio, Monarchia prima frangitur, incipiunt Hereses dira, armisque protecta, ob Martem & Lunam, fides plus armis quam miraculis ampliatur, &c.* under the fourth Trigon, which beholds the first by an intimal, or hostile Aspect, the Monarchy or Monarchies raised under the first Triplicity shall be broken, direful Heresies shall begin, protected by Arms by reason of *Mars* and the *Moon*, Faith more enlarged by the Sword than Miracle. He goes on, and saith further, New Religions and Tenents arise checking the former Austerity, or rather Superstition; all this to a good intent, because it is the Properties of the Stars to incline. Much more of this nature might be quoted out of Authors, but this being a Digression, shall suffice to let my Reader see that these Celestial Congresses are not trivial Speculations. This *Campanella* was by Birth a *Neapolitan*, born in the Province of *Calabria*, a Man of universal Learning, and writ many Books of several Sciences; he was 25 Years in the Inquisition, and severely handled, he was afterwards much favoured in *France* by Cardinal *Richlieve*, and died in the Year 1639. aged 71 Years.

The Entrance of this Triplicity was in the Year 1603. to which adding 199. brings us to the Year 1802. about which time they will change the Triplicity, the exact time must be known by Calculation, but about that time thy enter the early Triplicity. It is agreed by all, that the fiery Triplicity hath relation to Christians and Christianity, and many Changes and Alterations may yet be justly expected therein in general, and in the See of *Rome* in particular. Many are of opinion, that the Triple Conjunction of the Superiours in 1682, and 1783 in the Sign *Leo*, the Ascendant of *Rome*, would have great force on *Rome*, & cause many grand Mutations there; but the more modest believed not to its total Subversion: And indeed, the great Power of that See hath been much diminished of late Years, and great is the Expectation

Astrological Observations, 1702.

of many, That there will be yet greater Alterations, if not a final Catastrophe of the Sovereignty and Dominion thereof, at or before the Period of this Triplicity about the Year 1801. what the Effects of this Conjunction will be, time must determine. But in general, *Conjunctiones Saturni & Jovis res mutant & convertunt*; their Conjunctions do convert and change things, saith *Almansor*. *Cardan* adviſeth, *Cum videris Conjunctionem vel Oppositionem Superiorum in triplicitate ignea vel aerea, non festinus judicium, nec idem tradas in rebus parvis*; when thou seest a Conjunction or an Opposition of the Superior planets in the fiery or aery Triplicity, be not haſty to give Judgment, nor let it be of ſmall matters; for the Actions of theſe are præminent above the other Triplicities; and thoſe of the firſt and fiery Triplicity do exceed in Height and Glory: *Jupiter* hath moſt eſſential Dignities in the Conjunction, thoſe Perſons and Matters political, ſignified by the Benevolence of *Jupiter's* Influence, though ſaithfully and induſtriouſly managed, will receive much Reſtriction and Opposition by the Craft, Subtilty, Fraud and Hypocriſie of Men ſignified by *Saturn*. Of Perſons, Matters or Affairs Political, Civil or Eccleſiaſtical, ſignified by each of theſe Superiors, will prove too large a Task for my Scantling to inſert, hoping ſome abler Pen may undertake this Work, which hath been learnedly and ingenuouſly performed by *Mr. Lilly*, and ſince by *Mr. Edlin*. By reaſon of the Tardity of their Motions it is impoſſible to erect a Figure, or give you the face of the Heaven at the time of their Conjunction; by the *Caroline* Tables their Conjunction is on the 12th. or near 13th. By *Mr. Wing's* the 12th Day about 3 in the Morning. By another unknown Author I have the Calculation of their Conjunction on the 13th of May at 2 Hours Afternoon. There is a new Moon ſoon after the Conjunction, and in the Figure we find the conjoynd Superiors in the *imo Cæli*, or Fourth Houſe, which ſignifieth Conſults of great Obscurity and Secretſie; *Latet plane res quum Stella tam ſignificans, ſub terra eſt*; The Matter or Thing that a Planet ſignifieth, that is under the Earth, doth evidently lie hid and occult, at the Luration ſucceeding, the Planets are all under the Earth, and the Sign, and near the Degree of the great Conjunction on the Horoscope; but they

are

Astrological Observations, 1702.

are Oriental, and the Sun in Sextile to them; *Effectus Planeta Orientalis cito solet apparere*; The Effects of Oriental Planets do suddenly appear.

Of the Winter Quarter.

THis Quarter commenceth on December the 10th. at 42 Minutes past 11 at Night, at which time the Face of Heaven appears thus,

The { Midheaven 25 Degrees, 52 Minutes of II }
{ Ascendant 26 Degrees, 49 Minutes of III }

The Moon is just rising, and Saturn setting, all the rest of the Erraticks are under the Earth. Mercury retrograde in a Quartile Aspect to Saturn, ushers in the Quarter with cold Clouds, Snow or Rain; and Mercury aspects Saturn again on 25th Day with the like Aspect by direct Motion; *Tenebrosam aerem saepe producit iste Aspectus, gelu quoq; efficit eorum congressus*, This Aspect oft-times produceth a dark and cloudy Air, with Frost, Cold, and sometimes Snow or cold Rain. There are few considerable Aspects of the Superiors this Quarter; there is a Trine of Saturn and Mars in January, *Nives atq; gelu praesertim in signis Hyemalibus procreant*, Frost and Snow they often produce, especially in the Winter Signs; they do seldom patronize Rain, Moisture or fall of Weather, but they are seconded by a Conjunction of Saturn and Venus, which seldom fail of producing Snow or Rain, yet not with Violence, and they seldom raise high Winds; but this is to be observed, that they spend their Influence upon the Partel Aspect. Upon the first Quarter of the Moon in February there is a Conjunction of Saturn and Mercury, and will make us sensible of cold and uncomfortable Weather, of the same Nature of their Quartile in January. Soon after the Quartile of the Sun and Mars may probably cause a Remission of the former Extremity. The Sun and Jupiter end the Month, and welcome in the Month of March with a Lion-like Bluster. The Quartile of Jupiter and Mars at the beginning of March, is also a turbulent Aspect; *Reliquorum opinionum fundit Jupiter, & pluviam frigidam, & acres ventos excitat*, If other Planets assist, Jupiter snows, and sends cold Rain, and stirs up sharp and cold Winds. The Quartile of the Sun and Mars concludes the Quarter, and though he is famed

Astrological Observations, 1702.

famed for a hot and dry Planet, and consequently the Aspect should prove so, yet in *nostro Climate ventosas pluviasque Tempestates sapius producit quam siccas*, with us they raise moist and windy Tempests oftner than Drought: Time must interpret the Truth.

Of the Spring Quarter.

TH E Spring Quarter commenceth with the Sun's Entrance into the *Æquinoctial Sign Aries*, making our Days and Nights of equal Length: It hapneth this Year on *Monday*.

}	D. H. M.	}
	<i>March</i> 9 13 14 p. M. by <i>Sreet</i> .	
	9 13 30 p. M. by <i>Wing</i> .	

Or by the vulgar Account, on *Tuesday* the 10th Day at 14 Minutes by the first, and 30 Minutes by the other after 1 in the Morning.

The { Midheaven 20 Degrees 3 Minutes of ϵ }
 { Ascendant 17 Degrees 26 Minutes of γ }

All the Planets are under the Earth, *Mars* in the Horoscope, the two Superiors drawing towards their Conjunction: Great Consults on soor, and great Preparations for Superlative Actions. There is a Conjunction of $\odot$ and ♂ just upon the Vernal *Æquinox*; *Saturn* hath been owned by all the Ancient and Modern Observators of Celestial Influences, for a cold Planet, and his Complexion sheweth the same; *Antiquorum omnium consensu, quibus & succinunt Recentiorum observationes, Saturnus est nature admodum frigide & sicca, &c.* And 'twere endless to quote the Consent of the *Poets* and *Philosophers*, who have given him this Character. No wonder then if this Quarter begins with cold winterly and gloomy Weather, attended in some parts with Snow or Rain.

On the 22th. *Saturn* is accosted by a Quartrile Aspect of *Mars*, *Astrologers*, as well Modern as Antient, call them the greater Infortunes; and truly their Influence often answers their Character; *Violentos admodum effectus producere*, their Effects are very violent, but they mostly favour Drought, and seldom are the Patrons of Inundations. Their Influence stir up Strife and Contentions among the People, and a quarrellsom Humour in them against their Superiors; many

noto-

Astrological Observations, 1702.

notorious Thefts, Robberies and Murthers. *Haly* saith much to this purpose. I shall pass over the rest of the *Aspects* of this Quarter, only that the two Superiors make their Conjunction on the 12th or 13th of *May*; I shall not touch any thing of their Influences that extend to 28 years. As to their present Disposition to the Weather, they are *Cold* and *Dry* by reason of their Distance from the *Earth*, oft-times producing sharp, cold, cloudy, seculent and unwholsome Air; when the *Season* and other *Aspects* concur, they irritate Hear, and violent Effects therefrom, Lightning oft without Thunder or Showres; for *Jupiter* favours Drought, therefore probably a dry Summer may ensue.

Of the Summer Quarter.

THE Summer Quarter begins with the *Sun's* entrance into the first Scruple of the Tropick of *Cancer*, making our longest Day and shortest Night: It hapneth this Year on *Saturday*.

	D.	H.	M.	
{	10	14	21	p. m. by <i>Strict.</i>
	10	14	4	p. m. by <i>wing.</i>
				}

By the more vulgar Computation, on *Sunday* the 11th day of *Jun*, at 21 Minutes by the first, and 4 Minutes by the other, past 2 in the Morning, at which time

The {	Midheaven	2 Degrees 56 Minutes of ∞
	Ascendant	6 Degrees 54 Minutes of Π

At which time the two Superiors, *Venus* and the *Moon* are above the *Earth*, and in the ascending part of *Heaven*; *Mars* in the Ninth, and the *Sun* and *Mercury* under the *Earth*. The Opposition of *Mars* and *Mercury* inclines Libellers, and busie Bodies to make some Bustle upoa religious, or some gilded Pretences: Thieves and false Coyners exercising their pernicious Wits; *Pluvias crebras producit, ventos movet, quod hujus Aspectus maxime proprium est*; it produceth frequent Showers, raise the Wind, which mostly is the Effect of this *Aspect*. The Quartile of the *Sun* and *Saturn*, spreads cool and black Clouds; it signifieth the murmuring of Subjects against their Superiors, and false and underhand Dealing by pretended Friends. The Quartile of the *Sun* and *Jupiter* raise Winds, and probably Thunder. At the full *Moon* near the
latter

Astrological Observations, 1702.

latter end of *June*, the *Sun* and *Mars* are in Opposition, *fiunt strages*, &c. saith *Haly*, and probably we may suddenly hear of such Actions abroad where Armies are near. Although he is cooler at the Opposition than at the Conjunction with the *Sun*, yet he often affords us violent Tempests, and Thunder Showers, and an Air prejudicial to human Bodies. On the 5th of *July* *Mars* in his Retrograde Motion is in Quartile to *Jupiter*. On the 2d of *August* *Mars* comes to be direct, and on the 21th makes the same Aspect to *Jupiter*, who is then in the state of Retrogradation; *Æstare omnis generis vicissitudines violentas produxit, necnon fulminis terribile*, In the Summer all the Changes of Weather they produce, are violent, and also they raise terrible Thunders; they promote violent Actions, Robberies, Slaughters, Rebellions oft-times under Religious Pretences.

Of Autumn or Harvest.

THIS Quarter begins with the *Sun's* Entrance into the *Æquinoctial* Sign *Libra*, making our Days and Nights of equal length: It hapneth this Year on *Saturday*,

September	{	D. H. M.	}
	{	12. 4. 12. p. m. by Mr. Street.	}
	{	12. 3. 10. p. m. by Mr. Wing.	}

The	{	Midheaven 2 Degrees, 55 Minutes of $\nearrow$	}
	{	Ascendant 0 Degrees, 57 Minutes of ∞	}

The two *Superiors* are under the *Earth*, all the rest of the *Erratics* are above the *Earth*; the *Sun* and *Mercury* in Conjunction, and both of them soon after opposing the two *Superiors*, probably opposing a troubled Air, windy and turbulent, with Thunder by coast. In some Parts there will be Contests between the *Grandees*, *Clergy* and *Lawyers* about some *Charters*, *Constitutions* and *Customs*, according to the Opinion of *Haly*. Many *Embassies*, *Curriers*, and a busie time among *Mercurialists*, and such as trouble their Heads about Affairs of State and Government; but in most of the Quarter there seems no considerable Aspects of any grand import; but we are big with expectation of the Success of Foreign Affairs. The various Aspects in *October* and *November* may probably cause variety, and of changing Weather. The Quartile of the *Sun* and *Mars* on the 3d of *November*, the *Sun* opposing

Astrological Observations, 1702.

posing the *Pleiades*, may probably give us turbulent and unsettled Weather; for, according to Dr. Goad's Observation, Their Influence principally incline in (our Climate) to produce violent Tempests and Rain. He was a Man of indefatigable Industry, and strict Enquirer into this *Sideral Philosophy*, and to find out the utmost of the *Planetary Communication*, to use his own words, and a great Proficient he was therein; but *Ars longa, vita brevis*.

This learned and strict Observer having discoursed of the material Cause of all the Vicissitudes in the Air, viz. of Meteors, Rain, Wind, Hail, Snow, Mists, Lightning, Thunder, Comets, Blites and Blatings caused either by Lightning, burning Winds, as the East-winds recorded so in Holy Writ; or from cold or Hoar Frosts in the Spring, surprizing its unhappy forwardness. Of all these, saith he, there is not the least piece of a Phænomenon that is casual in respect of the Heavens, but they are conscious of its Original. It's true, the Inconstancy of the Winds with us in our Climate especially, that to foretel its Alteration, is abstruse and difficult, yet may be lur'd to the Rules of Art, being Heaven-bred, if we consider the direct Issue. I have kept a strict *Diary* of the Weather for several Years, and shall present my Reader with the Change or New Moons, Full Moons, and the first and last Quarter for 14 years, beginning at January 1687, and ending with the Year 1700. By which you may see how much they contribute to the Change and Alteration of the Air, though they are not the sole Disposers of its Constitution; the other 5 are called into the *Militia*, the Planets have all their Influence, are not made only for *Illumination*, but at present to our *Lunar Aspects*, in which time have been

New Moons	174	Wet	131	Fair	43
Full Moons	173	Wet	133	Fair	46
First Quarters	173	Wet	141	Fair	32
Last Quarters	173	Wet	127	Fair	46

I protest I have been as just in my Narrative, as strict in the Observation to the *Triduum*, viz. the Day of the Aspect, the Day before or after; should I have called in the *Sextiles* and *Trines* to give evidence, they would not have forfeited their Recognizances. For *Planetary Aspects* are no vain Terms of a *Bawling Art*, but are mysterious Schematisms of a secret Force and Power toward the Alteration of the *Sublunar World*, especially

Astrological Observations, 1702.

ally the Air, and those great Issues that depend thereon, according to the Natures of the Influences and influenced. And Experience will confirm the Truth hereof, whatever Ignorants, and such as know not what an *Aspect* is, suggests to the contrary; for the Ponderosity and Levity of the Air is founded on the Combination of their *Habitude* and *Energy*; but to conclude, *Airs non habet inimicum preter ignorantem.*

Of Eclipses.

There will this Year be Three Eclipses of the Luminaries, two of the *Sun*, and one of the *Moon*, which alone is visible in our Horizon. The first is of the *Sun* on the 17th. of *January* near half an Hour past one in the Morning, not seen by us, but in the remote Southern parts of the World. The Second of the *Sun* is on the 17 of *July*, somewhat past nine at Night. The Third is a visible Eclipse of the *Moon* on *Wednesday* the 23d of *December* in the Morning.

Astrological Observations, 1702.

The use of this Table is thus understood: Seek the Month under the Title Months in the first Column, and on the Head of the Table the Day of the Month, and in the Angle or meeting, you have the Hour and Minute of the seven Stars Southing. For example, *January 6th.* they come to the South at 26. Minutes past 7. at Night, as the letter A. for Afternoon doth denote. On the 21. of *March* they South at 46. Minutes past 2. Afternoon. On the 6th of *June* they come to the South at 47. Minutes past 9 in the Forenoon.

To find the Time of their rising, substract 8. Hours 16 Minutes, from the Time of their southing, and the Remainder is the Time of their rising; and if you add 8. Hours 16. Minutes to their southing, the Sum is the Time of their setting. If the Hours and Minutes of their southing be less than 8 Hours and 16 Minutes, you must add 12 that Substraction may be made, &c.

The Table following sheweth the southing of some other of the fixed Stars, after the 7 Stars, with their semidiurnal Arch, to find their rising and setting.

The Names of the Stars.	Time of southing.		Semidiurnal Arch.	
	H.	M.	H.	M.
The middle Star of <i>Orion's</i> Belt	4	52	5	14
<i>Aldebaran</i> , South Eye of the Bull	5	50	7	27
<i>Syrus</i> , the great Dog-star	3	3	4	30
<i>Procion</i> , the lesser Dog-star	3	54	6	32
The Head of <i>Hydra</i>	(A) 5	44	6	38
<i>Cor Leonis</i> , the Lions Heart	6	33	7	14
<i>Spica virginis</i> , the Virgin's Spike	9	40	5	11
<i>Arcturus</i>	10	33	3	42
South <i>Balance</i>	11	5	4	40
North <i>Balance</i>	11	32	5	17
Northern <i>Crown</i>	11	52	8	55

To know when *Aldebaran*, or the Bull's Eye comes to the South on the 6th. of *January*, I find by the former Table, that the seven Stars come to the South that Day at 26 Minutes past 7 Afternoon; I look into the Column of this Table, entituled, Time of southing, and against *Alde-*
baran

Astrological Observations, 1702.

baran I find 0 Hour, 50 Minutes, which I add to 7 Hour^s 36 Minutes, which makes 8 Hours 26 Minutes, which is the time of the Bulls Eyes southing. Now to know the time of that Star's rising, take his Semidiurnal Arch in the last Column, which is 7 Hours, 27 Minutes, which subtracted from the time of his southing, leaves 5 Hours, 59 Minutes, so that that Star riseth 59 Minutes Afternoon. If you add 7 Hours 27 Minutes to the time of his southing, it makes 15 Hours, 53 Minutes, subtracting 12, that Star sets at 53 Minutes past 3 in the Morning, which is easily understood by every intelligent Reader.

*Faules of the Press (if any be) kind Friend,
Pray pass them by, or with your Pen amend.*

*All Men are apt to err, since Adam fell,
'Tis Charity to pardon; so farewell.*

Amersham Bucks

July 26. 1701.

A D V E R T I S E M E N T S.

Mineralogia; or a Treatise of a Mineral Purging, and a Diuretick Salt of singular Use in the Scurvy, Dropsie, Collick, Rheumatism. Gout and Stone, and in all Cases where the Mineral Waters, either Purging or Chalybeat are prescribed, prepared only by Chr. Pack Chymical Physitian at his House in Little Moor-Fields, The Second Edition; where the Book and Salt are sold.

MR. Robert Bateman's true Spirits of Scurvy-Grass both golden and plain, so long famous for their Virtues, are truly prepared only by me Martha Smith, sole Executrix to the said Mr. Bateman, to whom only he communicated his Receipt for preparing them, which are to be sold at my House over against the Sun in Great Carter-Lane near Doctors Commons, and at other places, as in my printed Bills: Price each Bottle one Shilling.

The said Mrs. Martha Smith sells also the Grand Balsamick or Health-procuring Pills, approved by the most eminent Physicians to be one of the most safe and pleasant Purges in the World, their Virtues are set down in a printed Sheet given with them: Price one Shilling the Box.
